Napa Green:
How Vineyards and Wineries Are
Reducing Environmental Impact

Since 2004 Napa County vintners have been able to use the Napa Green certification process to reduce their environmental impacts and become more environmentally friendly. With rising concern about additional winery and vineyard development, it is important to understand exactly what types of environmental impacts are common and what practices are being used to mitigate those impacts. Speakers Laurel Marcus of Fish Friendly Farming and Susan Boswell of Chateau Boswell Winery will explain the rigorous certification process and the benefits that result.

Thursday, March 12, 6:30-8:30 pm. Napa Main Library.

Free. All are welcome.
